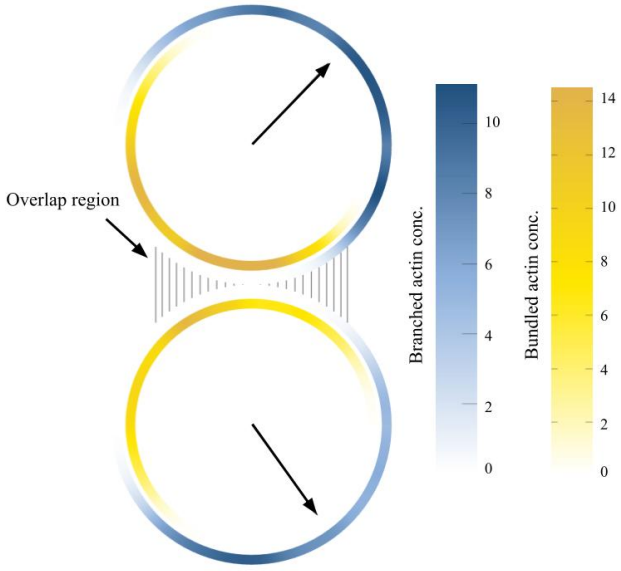
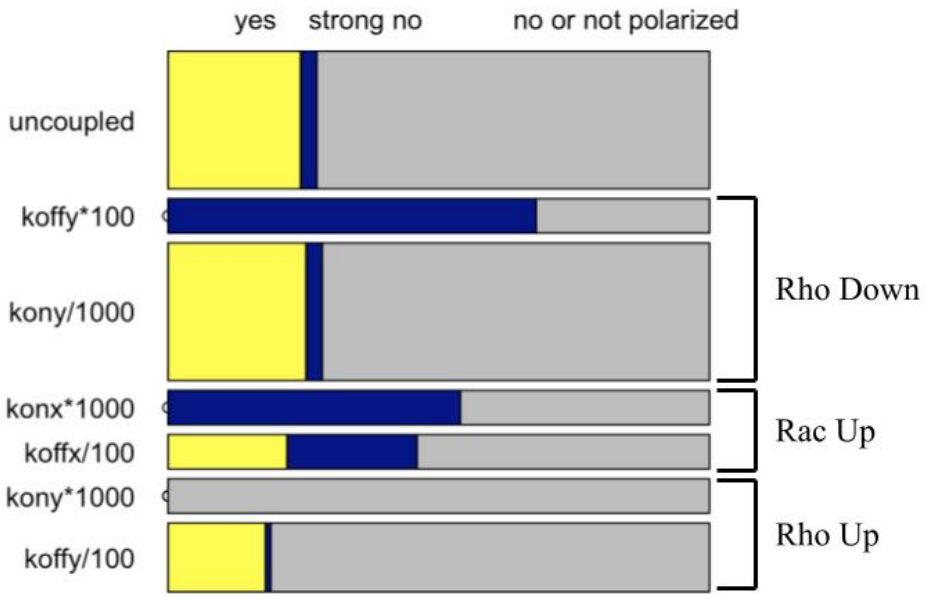
Two Cells

- Define a contact region between the two cells
- Uncoupled: nothing different happens at the contact region
- Determine if the cells are going in the same direction; within 45 degrees = yes



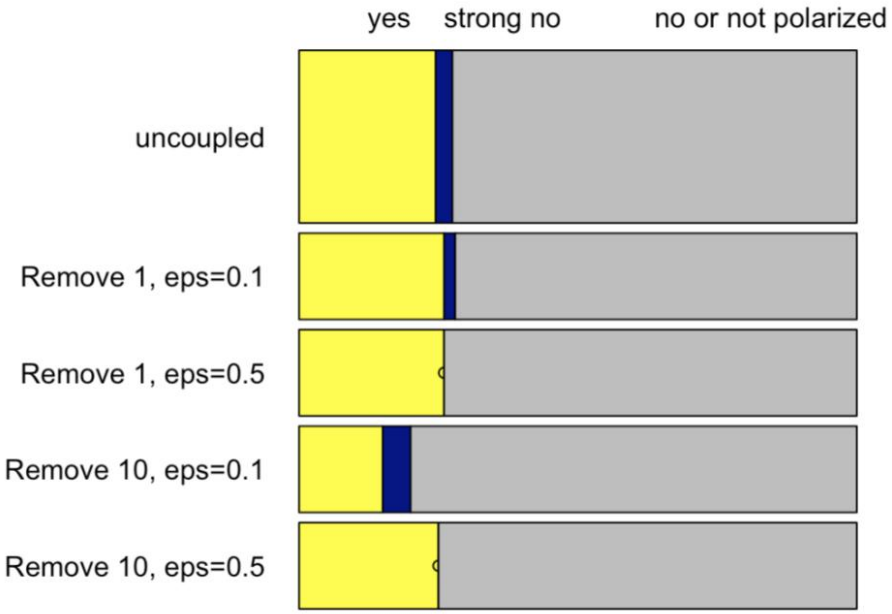
Rac/Rho Binding and Unbinding

Change binding rate (k_{on}) or unbinding rate (k_{off}) for rac (x) or rho (y) in the contact region.



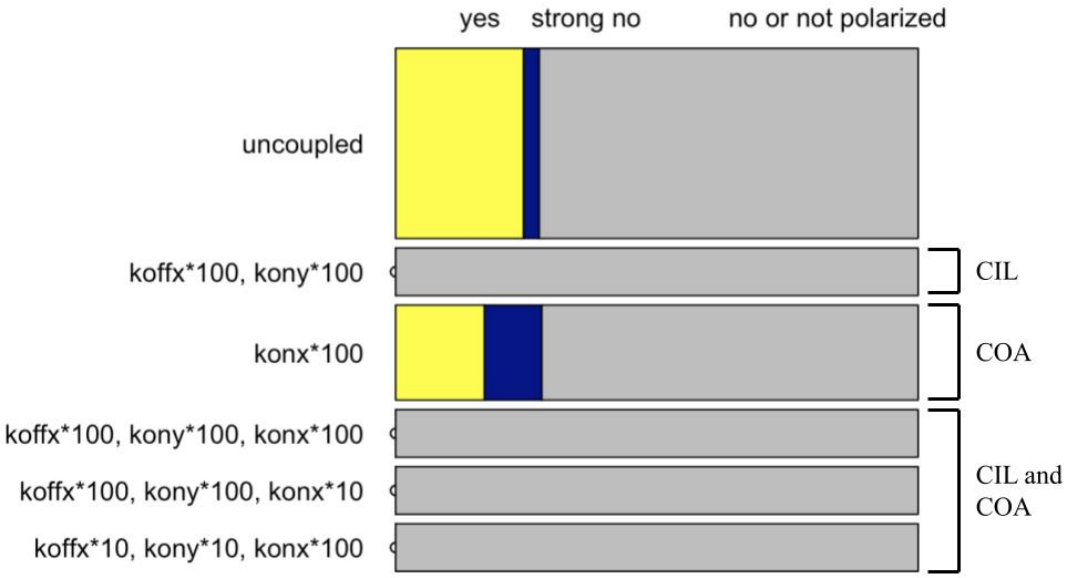
Increased Antagonism Between Rac and Rho

When a rac particle binds in the overlap region in cell 1, remove 1 or more nearby ($\varepsilon = 0.1, 0.5$) rho particles in cell 1. Do the same for cell 2.



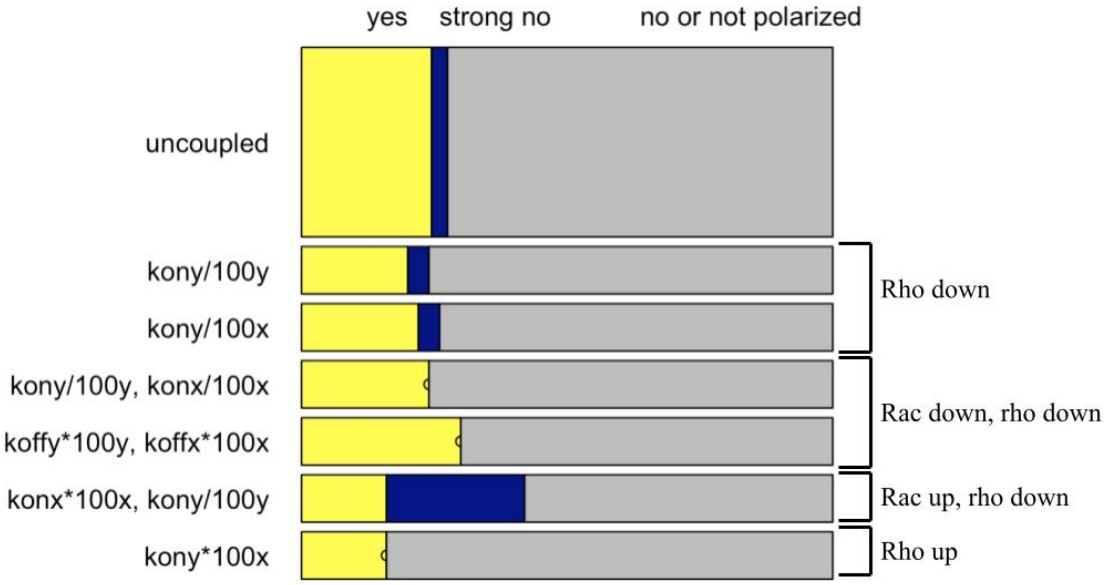
CIL AND COA

- CIL = Contact Inhibition of Locomotion; when cells are in contact, down-regulate rac and up-regulate rho so cells move away from each other
- COA = Co-attraction; when cells are nearby, up-regulate rac so cells move towards each other



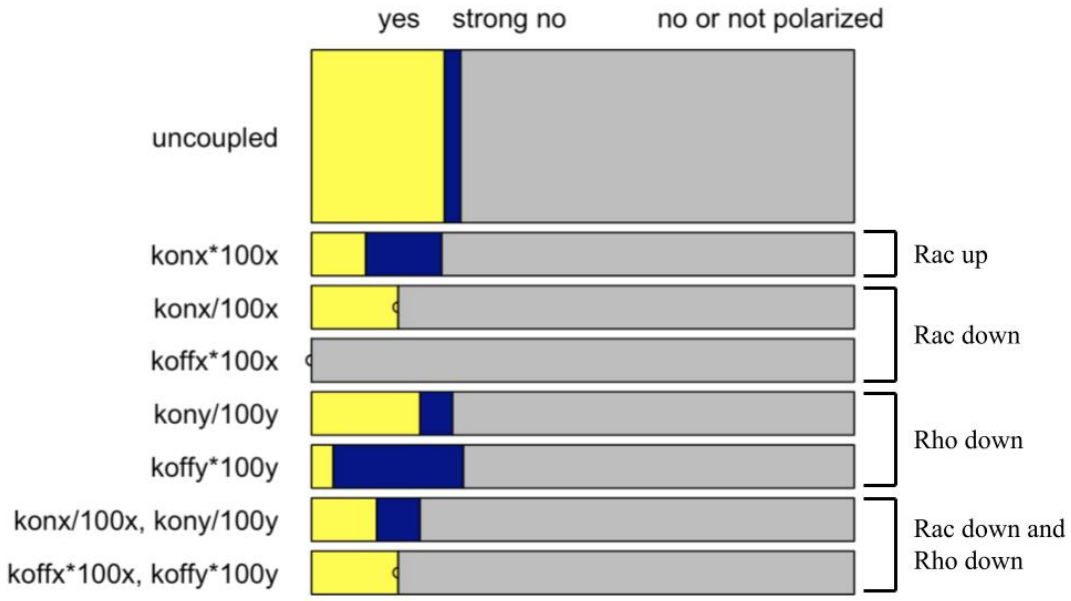
RAC/RHO PROPORTIONAL TO ITSELF

At each point in the contact region of cell 1, change the rac/rho binding/unbinding rate depending on the amount of rac/rho nearby in cell 1. Do the same for cell 2.



Rac/Rho Proportional to Other Cell

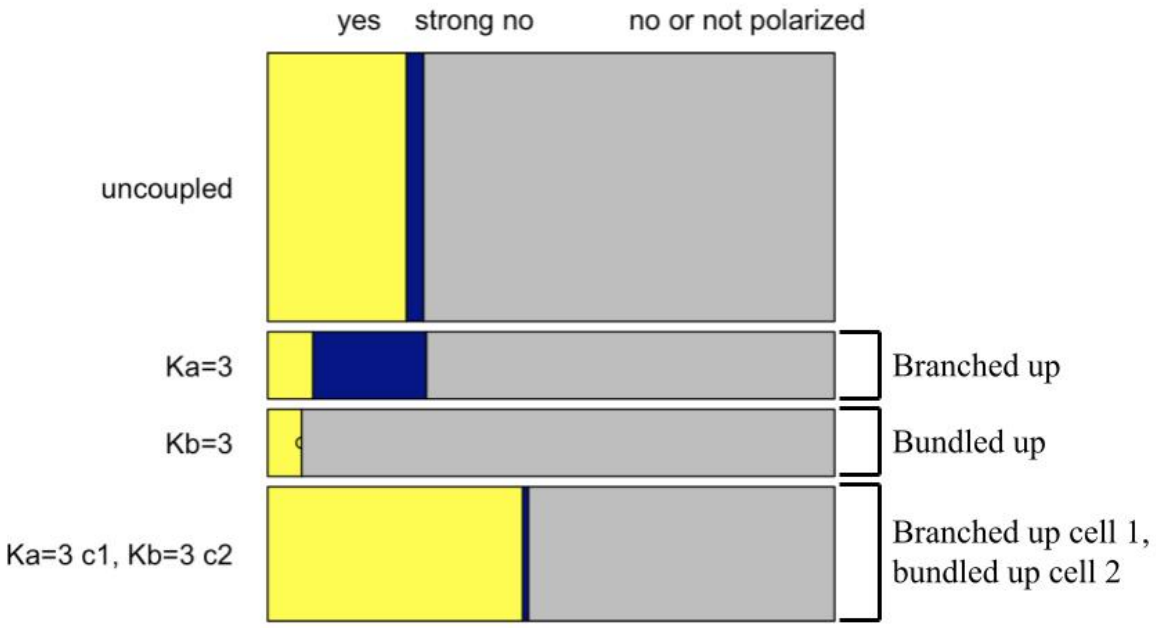
At each point in the contact region of cell 1, change the rac/rho binding/unbinding rate depending on the amount of rac/rho nearby in cell 2. Do the same for cell 2.



da/dt = Ka ((1-nrac)*a - a^2) - m0*a*b + diffusion
db/dt = Kb ((1-nrho)*b - b^2) - m0*a*b + diffusion

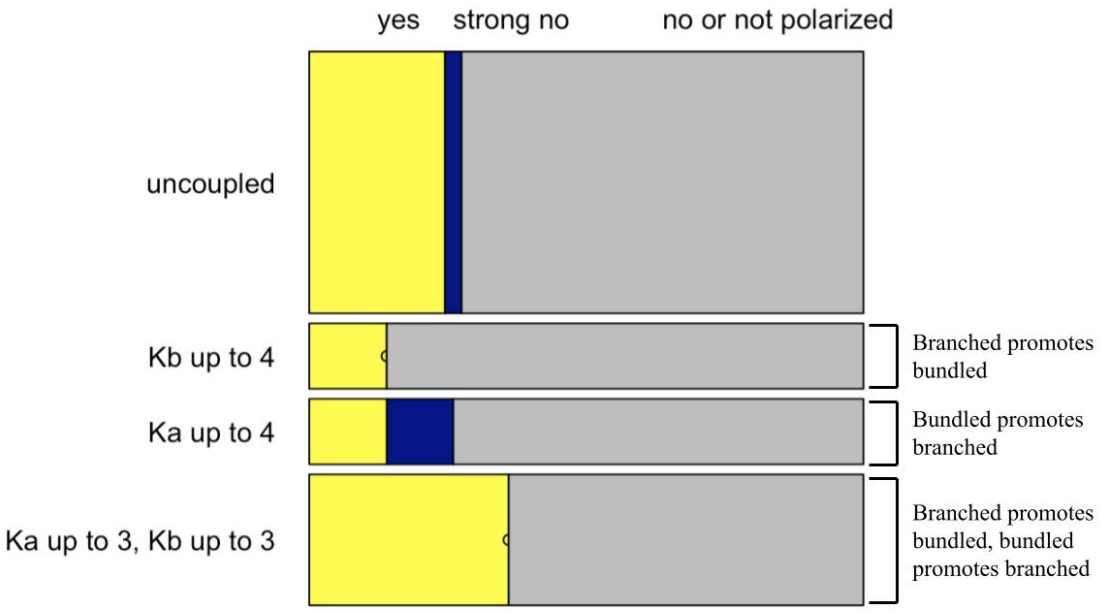
Branched/Bundled Actin Formation

Change the rate of branched or bundled actin formation by changing the coefficient K_a or K_b in the contact region.

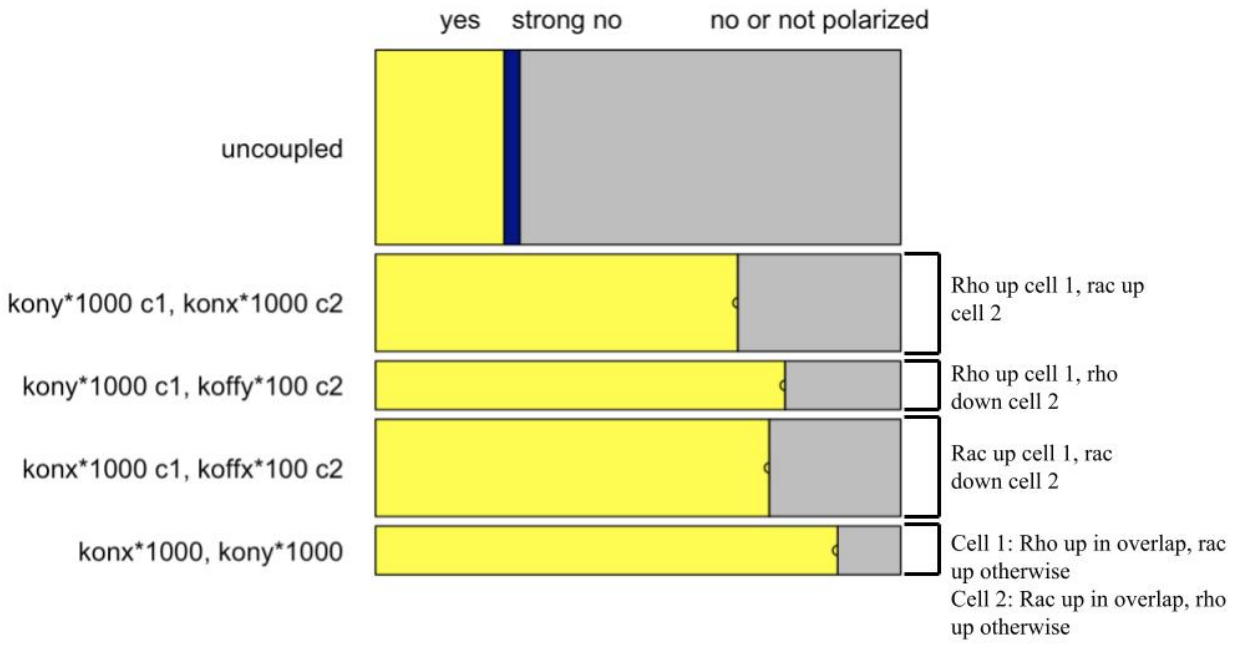


Branched/Bundled Proportional to Other Cell

At each point in the contact region of cell 1, change the branched/bundled coefficient depending on the amount of branched/bundled actin nearby in cell 2. Do the same for cell 2.



Rac/Rho Binding and Unbinding



NEXT: ADDING CADHERINS

- Add cadherins to incorporate more interaction between the two cells
- Cadherins will also bind and unbind from the cell membrane like rac and rho
- They will stabilize when both cells place cadherins near each other in the contact region
- Cells will place more rac in the areas with cadherins, so implement CIL in those spots
